Accepting Cryptocurrency on the Site

Paying for services and purchases in an online shop using cryptocurrency is becoming increasingly popular. Although cryptocurrency has only recently appeared and most people only know about it by hearsay, transferring crypto to an online shop for a purchase is no longer something fantastic. This method of payment is convenient for both entrepreneurs and their customers.

With our help, you will be able to accept cryptocurrency payments on your website without making the process more complicated for your users.

What is a payment gateway?

It is a program for secure payment acceptance. It can be implemented into your online shop to make payments using bitcoin or other cryptocurrencies. The API service is easy to implement on a website without wasting resources on self-development. Payments are accepted via the company's QR code for convenience.

Electronic money payment systems have many advantages over traditional payment systems.

What is the convenience of cryptocurrency?

Cryptoprocessing (a cryptocurrency payment system) has all the perks of blockchain technology: smart contracts, anonymity, security, fraud protection, infinite storage of assets, independence from banks.

The benefits of accepting cryptocurrency payments with our payment system:

- The user does not need a bank card or e-wallet transactions, which reduces costs
- A clear and fast payment process: the customer does not have to leave the website or open additional tabs to pay for the service
- Automatic crypto-fiat conversion at a set rate
- For businesses (including online retailers), it is an opportunity to accept payment from abroad, i.e., to develop projects even in difficult
- Easy to connect the payment module regardless of platform - only need an email address to register
- Easy maintenance of transaction statistics

There are also peculiarities with cryptocurrency: for example, you cannot get your money back if you accidentally transfer it to the wrong place. However, this is an adequate fee for the convenience of the system as a whole.

The use of cryptocurrencies is available to any business. Round-the-clock support helps with any cryptocurrency-related issues.
